

CONNECTIVITY SOLUTIONS

CONNECTIVITY SOLUTIONS

HIGH-PERFORMANCE CONNECTIVITY FOR MISSION-CRITICAL OPERATIONS

Connectivity is the backbone of every enterprise. Horizon delivers carrier-grade connectivity infrastructure designed with redundant architecture and SLA-backed performance, supporting national and international enterprise operations.

Service Portfolio

Dedicated Internet Access (DIA)

- Guaranteed Performance. Enterprise Reliability.
- DIA provides uncontended, symmetrical bandwidth with guaranteed uptime and SLA-backed performance, ensuring consistent speed and low latency for business-critical applications.
- Delivery Options:
 - Fixed Wireless (Microwave): Rapid deployment for remote or hard-to-reach locations. Licensed spectrum ensuring stability. Redundant last-mile options.
 - Fiber Optics: Ultra-low latency transmission. High-capacity scalable bandwidth (Mbps to multi-Gbps). Ideal for data-intensive environments, data centers, and enterprise campuses.
- Technical Capabilities: Symmetrical bandwidth. Static IP allocation. 24/7 NOC monitoring.

DDoS Protected Connectivity

- Always-on protection
- Multi-layer DDoS mitigation with real-time traffic scrubbing ensures business continuity during volumetric and application-layer attacks.
- Real-time threat detection. Multi-tier scrubbing centers. BGP diversion & filtering. 24/7 SOC oversight.

Private Networking

- Delivers end-to-end encrypted connectivity, ensuring secure data transmission across all locations
- Establishes an isolated network environment, giving organizations full control over access, data flow, and security policies
- Enables seamless integration across multiple sites within a unified, secure infrastructure
- Offers a scalable and resilient architecture that supports business growth while maintaining performance and data integrity

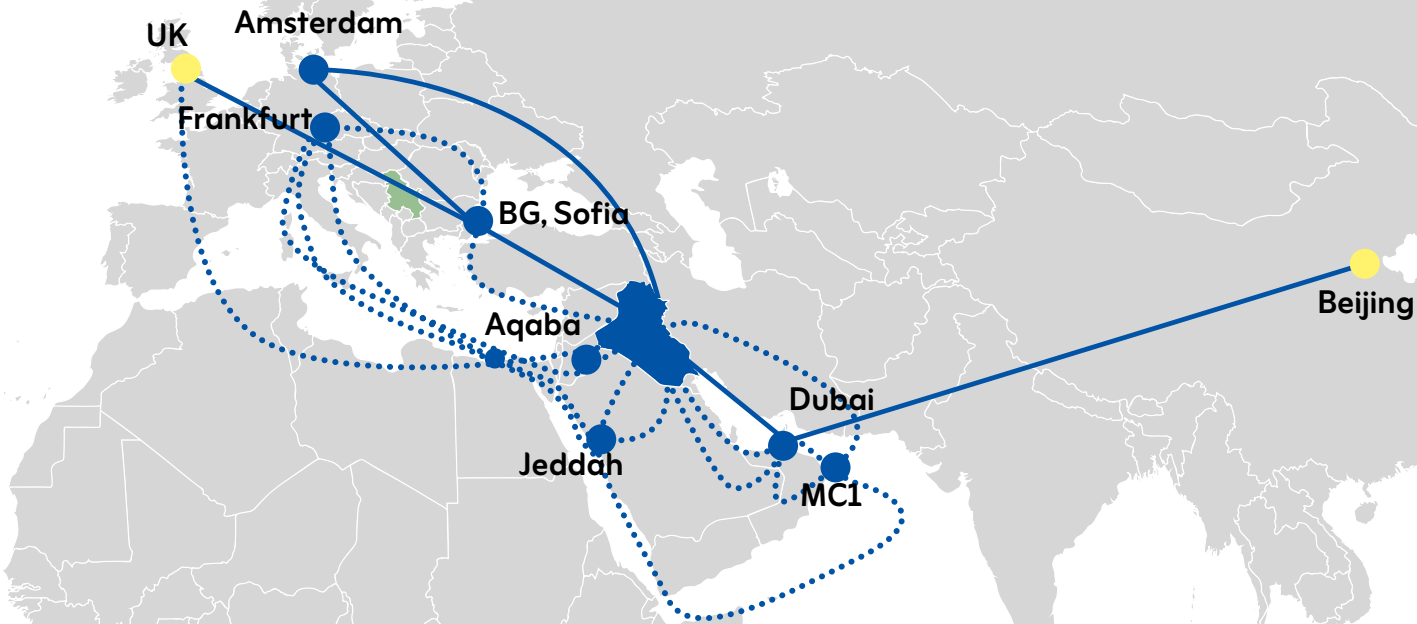

SD-WAN

- Intelligent, Application-Aware Networking
- Software-defined WAN optimizes traffic dynamically across multiple links (Fiber, DIA, 4G/5G), ensuring optimal performance and business continuity.
- Centralized cloud-based management. Application-aware path selection. Automated failover. Built-in security segmentation.

GLOBAL MPLS

Global MPLS is a secure, enterprise-grade networking solution that seamlessly connects headquarters, branch offices, and international sites through a private high-performance network, enabling reliable communication, optimized application performance, and business continuity across global operations.

- Enables a secure, multi-site WAN connecting headquarters, branch offices, and international locations through private, carrier-grade MPLS routing
- Ensures consistent, high-performance connectivity with QoS-based traffic prioritization for critical applications such as voice, ERP, and real-time services
- Minimizes latency and packet loss through optimized routing, supporting reliable communication across geographically dispersed sites
- Provides a scalable and resilient foundation for enterprise operations, accommodating network growth without compromising performance
